

Upgrading from PPCC to Mobile Data Studio

Pocket PC Creations (PPCC) has changed its name and new versions are now called Mobile Data Studio (MDS).

If you would like to use the new iPhone or the Android Mobile Data app, then after downloading the Mobile Data app to your iPhone or mobile device, you will need to install the latest version of Mobile Data Studio onto your server.

A trial version of Mobile Data Studio for the server can be downloaded from here:

<http://www.creativitycorp.com/mds/#trial>

You can install the trial version directly onto your server – Mobile Data Studio will keep all settings from the previous version when it upgrades it.

The trial version gives you 15 days to evaluate the new software. After this period of time, you have two options:

- If you do not want to keep the new version after the trial runs out, you can **uninstall** and then reinstall PPCC again.

However you must be aware that once a project file has been opened in Mobile Data Studio it is no longer compatible with PPCC. Therefore if there is the possibility that you will decide to revert to the original software – which the developers think is unlikely – you must keep backups of your original files to restore.

- You can purchase the **upgrade** to Mobile Data Studio.

Note that the new software controls licensing much more closely than the old one and additional costs may be incurred. Costs can vary depending on when you bought the original licences and the total number of mobile units you have connecting back to the server.

Mobile Data Studio will reject mobile units if you attempt to connect more units than your licence permits.

Contact **Start Software** on **0845 612 2402** if you would like to purchase the permanent upgrade or if you would like us to calculate the costs for you.
