

# Setting up a New Android Phone

1. Assemble and charge your new Android phone and ensure that you can get an Internet connection.
2. Using the Browser on your phone, visit this page:  
<http://www.creativitycorp.com/mds/>
3. From this page, download and install the trial version of Mobile Data Studio.

4. Return to the Home screen, and locate the *Mobile Data* icon.

Tap on the *Mobile Data* icon to open it. A screen is displayed for you to enter connection setting details.

5. Set the connection details as follows:

- enter your server address and password (if one has been set)
- assign a unique unit ID to your phone, eg “Unit1”, the user’s name or their initials.
- ensure the following options are ticked:
  - *Maintain a continuous connection*
  - *Receive new sessions upon connect*
- set the *Purge Sent and Delete sessions after* option to “Delete after 7 days”.

6. Press the **Back** button or **Connect** on your phone to connect to the server and display the Mobile Data screen.
7. On the server, open Mobile Data Studio and click **Monitor** to display the Wireless Activity dialog box. Then right click on the unit name that identifies the new phone, select **Update Project** and then **Tracker Mobile** to send the Tracker Mobile project to the new phone.  
Alternatively, call Start Software on 0845 612 2402 so we can ‘push’ the software to your new unit.
8. On the phone, on the Mobile Data screen, you will now be able to see the *Tracker Mobile* icon. Tap the icon to open it, press the **Menu** button and select **Synchronise** to update your projects.

You are now ready to begin a new session.
